

PROFILE

Cybersecurity student focused on SOC, network security, identity, and detection engineering. Builds hands-on enterprise, Active Directory, monitoring, and cloud labs to understand how systems fail, what telemetry they leave behind, and how defenders can investigate them.

EDUCATION

HUFLIT - Ho Chi Minh City University of Foreign Languages and Information Technology 2023 - 2026
Cybersecurity Program

TECHNICAL FOCUS

Network & Infrastructure: VLAN, STP, OSPF, VPN, pfSense, Cisco Packet Tracer, VMware, Windows Server, Linux
Identity & Windows: Active Directory, Kerberos, GPO, PKI, Windows Event Logs
Detection & SOC: Splunk, Sigma, Suricata, Wireshark, event correlation, triage, MITRE ATT&CK
Cloud & Delivery: AWS, Docker, GitHub Actions, OIDC, ALB, CloudWatch
Scripting: PowerShell, Python, C#, .NET

SELECTED PROJECTS

SOC Homelab / Splunk SOC / Detection
Built a small SOC environment that generates suspicious activity, collects Windows/Linux telemetry, uses Splunk searches and Sigma-style detections, and follows alerts through correlation and investigation.

BinCorp Enterprise Infrastructure Lab Network / AD / Security
Designed an enterprise-style lab combining segmented networking, Active Directory, PKI, VPN, pfSense, Suricata, and Splunk so identity, endpoint, and network evidence can be analyzed as one system.

Cloud Assignment System Cloud / DevSecOps
Containerized a .NET application and implemented GitHub Actions CI/CD with OIDC-based AWS authentication, load-balanced HTTPS deployment, and CloudWatch monitoring.

ADDITIONAL WORK

- Threat Hunting & Detection Engineering - timeline building, correlation, MITRE mapping, triage, Sigma rules.
- Binh Minh Enterprise Network - physical/logical design, VLANs, redundancy, routing, WAN and validation.
- Zero Trust Endpoint Security - endpoint posture, identity, VPN, policy and enforcement flow.

CERTIFICATION

Cisco CCNA In Progress
