NGUYEN NGOC KHAI

CYBERSECURITY FRESHER | NETWORK SECURITY • SOC OPERATIONS • THREAT HUNTING

Ho Chi Minh City, Vietnam | +84 904 568 786 | ngockhai.sec@gmail.com
Portfolio | LinkedIn | GitHub

PROFILE

Cybersecurity fresher with hands-on experience designing segmented network and Windows/Linux labs, configuring firewall, VPN and directory services, and analysing endpoint and network telemetry. Familiar with TCP/IP, VLANs, pfSense, Active Directory, SIEM monitoring and incident triage; seeking an entry-level Network Security or Security Operations role.

EDUCATION

Ho Chi Minh City University of Foreign Languages and Information Technology (HUFLIT) | 2023–2026
Bachelor's Program in Cybersecurity | Coursework completed; graduation review pending

PROJECT EXPERIENCE

BinCorp Enterprise Infrastructure Lab | *AD DS, AD CS/PKI, pfSense, OpenVPN, Suricata, Splunk* | GitHub
- Designed a segmented enterprise lab across server, client, DMZ and VPN zones; deployed dual Domain Controllers, AD CS/PKI, role-based file access, pfSense/OpenVPN, Suricata and centralized logging.
- Validated Windows Event ID 4625 monitoring, VPN logs, proxy blocking, Domain Controller failover and internal PKI/HTTPS; centralized Windows and pfSense logs in Splunk.

SOC Homelab – Splunk SIEM | *Splunk, Kali Linux, Windows/Linux Logs, DVWA* | GitHub
- Built an end-to-end SOC workflow for attack simulation, Windows/Linux log ingestion, detection, alerting and dashboard visualization.
- Simulated network scanning, SSH brute-force and SQL injection; created SPL threshold searches for repeated SSH failures and configured alerts and dashboard views in Splunk.

Threat Hunting & Detection Engineering | *Wazuh, Sysmon, PowerShell, Sigma, MITRE ATT&CK* | GitHub
- Built a three-system Kali Linux–Windows–Wazuh lab collecting Windows Security, Sysmon, PowerShell 4104 and Wazuh FIM telemetry.
- Simulated an authorized RDP password-guessing-to-valid-access chain, certutil file transfer and a PowerShell TCP callback; developed 5 behavioral hunts, mapped 6 observed ATT&CK techniques and authored 3 Sigma rules.

CYBERSECURITY ACTIVITY

Google SecOps Chronicle CTF – Cymbal Investigation | Oct 29–Nov 1, 2026 | Portfolio
18/18 solved • 2,075 pts • Team rank 584/1,716
- **OAuth Heist:** Investigated an OAuth-related compromise involving suspicious SSO infrastructure, an Okta MFA-factor change, service-account activity, database backup access and exfiltration indicators.
- **Rogue Synthesis:** Correlated Chronicle, Zscaler network logs and Sysmon telemetry to trace a malicious VS Code extension, process injection (T1055.012), cloud-credential access, outbound exfiltration and CI/CD build-script manipulation.

Pointer Overflow CTF 2026 | Participant & Solver | Oct 2026 | Portfolio

TECHNICAL SKILLS

Networking: TCP/IP, VLANs, network segmentation, pfSense, OpenVPN, VPN; STP/OSPF
SOC & Security Monitoring: Splunk, Wazuh, Google SecOps Chronicle, UDM, Windows Event Logs, Sysmon, Sigma, MITRE ATT&CK, Suricata, log analysis, alert triage
Systems & Identity: Windows Server, Linux, VMware, Active Directory, AD DS, AD CS/PKI, DNS, Kerberos, access control
Scripting & Query: PowerShell, SPL

CERTIFICATIONS & LANGUAGE

Cisco CCNA (200-301): In Progress
IELTS Academic: Overall 6.0 (Apr 2023; expired Apr 2025), CEFR B2
